

One Stop Services Tracker System

InData Systems One Stop Services Tracker

Features and Benefits

- Able to use inexpensive swipe readers
- Simple to scan at YOUR workstation
- Constant feed to central Data File
- Less Expensive total package
- Complies with SWIB Advisory #03-4
- Software and Scanners Made in NY !

How do you track the utilization of your One Stop Service Center and the core services? The State Workforce Investment Board and the Department of Labor are now requiring local One Stop Centers to track, with a card swipe system, the activity at their centers. By issuing clients an ID card that can be swiped at the Centers, real time data can be collected that can quickly be turned into reports both to comply with government reporting requirements, but also to be used by the management of the One Stop Centers to best analyze their services rendered. By putting the swipe readers AT the service provider's workstation it enables the work center staff to give more personalized attention to their clients without incurring the high cost of stand alone or networked terminals.

Small Card Swipe reader for EACH workstation

The InData Systems One Stop Service Tracker is very easy to install and use. It is based on a small data entry screen that can be installed on any of the center's Windows based work stations and allow the service provider to conveniently log in and out the time spent with a client at their desk WITHOUT the clumsy step of getting up to go swipe the client's card at one of the few expensive stand-alone terminals that can be provided by other tracking companies.

Complete System available:

- Card printers – Single or Multi Color
- Card Swipes at your Workstation
- Central Access Database for secure data
- Supplies–Cards, Ribbons and cleaner kits
- Versatile report capability
- InData Systems Support
