

License Scanner

Features

Prevents Check Fraud

Captures Image of License

Automatically fill out forms

Store picture and license information

Many Footprints available

Excellent for many applications

Benefits

Reads barcode from Drivers License and allows operator to compare it to the typed information on front of license.

Image of Picture and signature can be used for verification at later time

Data from barcode on license allows forms to be filled out to speed processing of customers.

Data from license and image of front of license can be stored for security and demographic purposes

Units can be mounted vertically to wall or placed flat on counter.

The InData Systems License Scanner can be used in Emergency rooms, and trade shows as well as be used for Firearms Registration and Alcohol and Tobacco Age Verification.
