

# InData Systems Mobile Age Checker

InData Systems Mobile Age Checker unit

## Features and Benefits

- Self Contained Drivers License Reader, Display and rechargeable battery pack
- Instantly computes age of Licensee
- Immediately identify under-age people
- Swappable battery recharges PDA
- Optional Wireless Networking
- A key component of **compliance**
- Quick ID **verification** provides **subtle** response
- Helps **prevent** human **error** and reduces workplace stress

How do you easily check and prevent the admission of under-age individuals to nightclubs and age restricted entertainment and keep customers and employees smiling? This unit can help with both issues.

The InData Systems Mobile Age Checker system is a simple-to-use, hand held unit that includes an easy-to view PDA (Personal Digital Assistant) with a PDF (and optional mag. stripe) reader and a quick change rechargeable battery interface. The scanner can quickly read a drivers license and display whether the person is over 21 (or your specific age threshold). It also can display the encoded information to compare to the front of the driver's license to help assess if the license is forged. Wireless interface (802.11b) allows the linking to local servers for mail list and/or log of "due diligence" efforts. A link to a police interface could allow checking for outstanding warrants or other critical information. With a simple insertion of the customer's drivers license, the display responds instantly with an OK or denial of admission/purchase of typical age-restricted products - tobacco or alcohol.

Standard Mobile Age Checker system without case

Denying customers a purchase or admission is always challenging, but you need to comply with the law. Cashiers say that it is often easier to tell the customer that the system - rather than the cashier/attendant - has denied the sale or admission.

# InData Systems Mobile Age Checker

The InData Systems Mobile Age Checker System performs the age calculation locally - no phone line or external computer interface is required. Both visual and audio feedback may be provided. It is also ideal for tobacco stores, dining establishments, police agencies and anywhere age-restricted items are sold or checked.

Owners like the compliance aspect. Cashiers and attendants like the speed and convenience. Everyone likes how it is part of a comprehensive compliance and awareness program that helps keep operations running smoothly.

The system is designed to work with 2D Bar coded drivers licenses from the following states and provinces:

✍ Alabama	✍ New Hampshire
✍ Arizona**	✍ New York
✍ Arkansas**	✍ North Carolina
✍ Colorado**	✍ North Dakota
✍ Delaware	✍ Ohio**
✍ Georgia	✍ Oregon
✍ Hawaii**	✍ Pennsylvania**
✍ Idaho**	✍ Rhode Island**
✍ Illinois	✍ South Carolina**
✍ Indiana	✍ South Dakota**
✍ Iowa	✍ Utah**
✍ Kentucky**	✍ Virginia
✍ Louisiana**	✍ Washington**
✍ Maine	✍ Washington DC**
✍ Maryland**	✍ West Virginia
✍ Maine**	✍ Wisconsin**
✍ Massachusetts**	
✍ Minnesota**	
✍ Mississippi**	
✍ Montana	
✍ Nebraska	
✍ Nevada**	

#### Canada:

- ✍ British Columbia
- ✍ New Brunswick

\*\* State may have pending or beginning use of 2D bar code

Licenses from other states that only support Magnetic Stripes may be read with our Magnetic Stripe option

The InData Systems Mobile Age Checker is an innovative design that allows the use of commonly available, lithium-ion rechargeable batteries (spare battery and external charger are included) that recharge the PDA while you use it, in addition to running the scanner section. The Drivers license scanner section can include a magnetic stripe reader in addition to the PDF-417 bar code reader to allow scanning of licenses from states that still use that technology and membership or credit cards for custom applications. The display section is a Pocket PC based unit that allows easy programming for custom applications and wireless networking interfaces.

The AAMVA (American Association of Motor Vehicles Administrators) is a group that has set standards that most states follow for their drivers license design and formats. PDF-417 is a 2 Dimensional barcode that is able to encode a large amount of data including the license holders address and date of birth among other things.
